

Installing the abbrev file

First:

This is the most recent version of the abbrev file and you should install this file.
Versions on the web are older than this.

Save the .kmf file where you can find it

Open SAS

On the menu bar select

Tools-> Keyboard Macros -> macros

Click import and navigate to the .kmf file you saved

Select the file and click on open

You are done.

Click the X in the red box in the upper right Hand corner and you are good to go.

The abbrevs are case sensitive and functions require the (before they are recognized.
